

Craft Paper

The sandwich panel with craft paper is used in the terrace roof coatings alternatively. The lower surface of the panel (painted galvanized sheet) is made of metal, and the upper surface is made of Kraft paper. Craft paper is cellulosic based and suitable for the water insulation layer on the terrace roofs. The cap profile is installed in opposite direction during the installation. Then the panels are bolted to the purlins with the side with craft paper looking upward. The panels are fixed with the automatically step opening bolts to the carrying system.

Craft Paper Standards

Product Type		Craft 70	g/m ²
Weight in grams		70±2,4	g/m ²
Moisture		7±0,7	%
Tensile Strength	MD	5,5	KN/m
	CD	3,5	KN/m
Elongation	MD	1,8	%
		6	%
